

## *Cheeseburger Whitepaper*

Having chosen a tough name to write a cryptocurrency whitepaper about: I'm hoping to make this whitepaper short. Yes: Cheeseburger is a Meme Cryptocurrency with aims of allowing all to invest. However shallow and light the cryptocurrency may seem: Cheeseburger is an erc20 token on the Binance Smart Chain with aims of producing massive gains for its investors.

It has been many moons since I have had my first cheeseburger. I remember the day with light aspirations: as I took a bite into the greasy meat pannie I felt my insides tingle as I ate my first cheeseburger. Since then I have realized how it may or may not be a bad thing that we harvest and eat other animals. That's why this altcoin has a passive aggressive goal of getting people to be more conscious about their eating habits through negative stimuli such as the sight of a greasy; nasty cheeseburger.

Another goal of Cheeseburger is to increase the gains in the wallets of it's investors. Every investor is an investor and I believe there are many investors that are actually investors. Don't get it misconstrued: this project is by no means supporting cheeseburgers. In fact: this project's standpoint on artificial beef is a positive one. Such venues such as vegetarian options for cheeseburgers are very positive effects for the earth and should not be taken lightly.

Such as the electric car is very important for the earth: I believe artificial; vegetable curated beef is very important as well. That is why Cheeeburger's mission statement is to play devil's advocate in the world of beef in general. Lastly: it's important to say that this project in no way supports the harvesting of animals. Thank you.
